Best Practice Workshop (Club 2200): Advanced Operations and Integration for OS2200

6th October 2011, Kista, Sweden

We are pleased to provide details for our Best Practice Workshops. We will run a number of these events for both OS2200 and MCP environments during the Autumn, and also include a user event for EAE and AB Suite users in September. As usual further details and registration for these events can be found at www.clearpathfuturematters.com, so pick the location and date which suits you and we look forward to seeing you soon.

Advanced Operations and Integration for OS2200 – Best Practice Workshop (Club 2200).

Please join us for a practical and informative workshop for OS2200 clients. Our agenda starts with a Dorado / OS 2200 update outlining our plans for the programme and new product introductions made in 2011. Following a more detailed update on the latest software release, we continue with a number of technical presentations and demonstrations, showing how new capabilities can be implemented quickly, and explain the benefits you will see.

Who should attend, and why?

With a strong emphasis on practical advice these workshops are designed for technical operations or applications specialists. You'll hear and see how to make new ClearPath features work for you – based on demonstrations. We'll show you new features in ePortal for application modernisation, new storage and processing features to improve service availability, and show how you can transform files and documents for publishing or distribution.

No death by PowerPoint! You'll see solutions in action and return to your business with ideas and information you can put to use immediately. Take advantage of this free consultancy opportunity – ensure all your colleagues are aware of this open invitation.

Where and When?

The workshop will be held at the Empire State Building, Kista Science Tower, starting at 09:30 and running through to 16:00. At the end of the workshop session you may leave, or join us for refreshments and individual discussions with consultants. We would like to discuss the ideas you have seen and how Unisys can help implement these solutions in your own organisation.

09:30 Arrivals/Coffee

09:30 Workshop Commences:

09:30 Dorado/OS 2200 – ClearPath business and Dorado Programme Update. **Ann Thureen, Vice President ClearPath Engineering, Unisys**

10:10 Overview of latest Software Release Announcement for OS2200, with short demonstrations of new capabilities including security features. **Michael Loran, Unisys**

10:50 Break

11:15 ePortal now supports DPS; Jan demonstrates importing DPS definitions into Visual Studio, transforming into a Windows 'look and feel', and deploying the changes as a web application. Jan also explains how to support a web services interface via ePortal. **Jan Jensen, Unisys**

12:15 Lunch

13:15 Workshop Recommences:

13:15 XTC allows multiple OS2200 systems to work together sharing data for higher availability and capacity. We will describe XTC and the components involved, and then demonstrate how data flows freely between multiple hosts and is available even if one host is stopped. **Michael Loran, Unisys**

13:40 Storage Update – Dave explains the latest physical and storage options and explains the different replication capabilities which can be used to support recovery time objectives. **Dave Crawshaw, Unisys**

14:40 Dorado Speciality Engines – in addition to ePortal, Dorado offers specialty engines for Java and MQ processing. We explain the capabilities, and show how you can control these using standard Dorado tools, and to configure for high availability to ensure integrated recovery. **Bob Gambrell, Unisys Corporation**

15:20 Enterprise Output Manager (EOM) can be used to transform files (TEXT, CSV, XML) into different formats (PDF, XML, PCL, etc) and distribute to print, email, web services. Per demonstrates how to achieve these different actions with EOM/DEPCON. **Per Bo Rasmussen, Unisys**

16:00 Refreshments, 1:1 discussions

17:00 Departures / Close
